**Loss Analysis Report**

| Particulars                   | Observation                                           |
|-------------------------------|-------------------------------------------------------|
| Asset                         | Bitcoin (BTCUSD)                                      |
| Trade Date                    | 21/08/26                                              |
| Trading Strategy Used         | Combined Based Strategy                               |
| Original Trading Plan         | Buy at a lower price and sell when the price goes up. |
| Reason for Entering the Trade | Bitcoin price was low, so I expected it to increase.  |
| Planned Entry Price           | 77,000(Approx.)                                       |
| Actual Entry Price            | 77,686                                                |

|                                      |                                                                                    |
|--------------------------------------|------------------------------------------------------------------------------------|
| Exit Price                           | 77,189                                                                             |
| Realised Profit/Loss                 | Loss                                                                               |
| What was Expected to Happen?         | I expected the Bitcoin price to go up and give a profit.                           |
| What Actually Happened?              | The price went down instead of going up, so I got a loss.                          |
| Main Factor Associated with the Loss | The Bitcoin price suddenly went down.                                              |
| Initial Observation                  | The trade shows that we should check the market carefully before entering a trade. |
